

Technology consulting and technical project management airline

Client	Role/Function	Task	Duration
Large German Airline	Requirements management, provider control and technical project management	Development of a WLAN-supported Inflight infotainment & video-on-demand platform for a German airline.	2.3 Yrs
Problem			
<p>An in-flight infotainment system with an integrated video-on-demand platform is to be developed for medium- and short-haul aircraft. Passengers may use the platform with their own devices (Bring Your Own). This means a significant weight saving by eliminating built-in devices in the seats and the need for cabling.</p>			
Order			
<p>Design / Specification, Supplier management, Requirements management and support of the overall project management with technical expertise</p>			
Result			
<p>The in-flight infotainment system was successfully developed, certified for flight operations and put into production and operation. Customers include the company's own airline as well as airlines from other airlines.</p>
