

Technical Project Management Market Research

Client	Role/Function	Task	Duration
Market research institute	Technical project manager	Implementation of the ETL path (Extract/Transform/Load) together with the Machine Learning system for a Big Data platform.	2.5 Yrs
Problem			
<p>The legacy system, which has reached its limits, is to be replaced by a horizontally and vertically scaling Big Data Lake. The use of agile and DevOps-driven development and operational processes should drastically reduce personnel requirements compared to the legacy system.</p>			
Order			
<p>Technical project management in an agile DevOps environment under re-insourcing of previously outsourced development and operations tasks.</p>			
Result			
<p>The big data platform could be developed and operated on site. The promise of tying up fewer staff in development and operation was kept. The customer was thus able to optimize processes and dispense unfavorable contracts with offshore and nearshore service providers.</p>
